News & Information from Endurequip

May 2009

## ERGON PROBLEM SOLVED

Endurequip has recently completed building a set of specialised lifting and rotating units for Ergon Energy in Brisbane. The units will greatly assist Ergon in the production of sub stations. They have been designed to lift and rotate the substation base to assist in the welding of the complex framework.

Ergon are longstanding clients of Endurequip, having for some years used a set of Endurequip's portable heavy vehicle hoists to lift completed substations (weighing up to 40 tonnes), when loading them onto low loaders to be transported to sites all over the South East.

When Ergon wanted to introduce a better, faster and safer way of fabricating their sub-station sub-frames, they came straight to Endurequip for the answer. Endurequip's Engineers designed the special hoists from scratch, taking into consideration all aspects of the task and functions required.

Despite their large physical size, the hoists can be very easily and safely maneuvered into position to perform their lifting and rotating functions via Endurequip's motorised wheel drive system. This system allows the hoists to be positioned by a single operator in a very safe and simple manner. The system is set to the desired operating speed to suit the task being performed via a variable speed drive.

This is just one of many specialised jobs that Endurequip has built for major clients with specific lifting problems. Endurequip has the expertise to design, build and commission on-site, all types of specialist hoists.

**If you have a lifting problem, talk to Endurequip about the best way to solve it.**

# SHOP TALK

*With Managing Director, Neville Leighton*

**Endurequip enjoyed a busy and productive 2008 and looks forward to 2009 being much the same.**

At the time of writing, besides our on-going day to day business of manufacturing and supplying Portalift hoists for the general truck and bus markets, we are building three extra heavy hoist systems which will be used to lift large mining vehicles in Mount Isa and at Anglo Coal mines in the Bowen Basin.

These systems will be completed and commissioned over the next few months and we expect the level of interest from other mining operators to be high, resulting in further orders.

In 2008 I took the opportunity to visit Automechanika in Germany. This is the largest automotive show in the world and takes place every two years. All leading European manufacturers have their latest wares on display. I am delighted to say that I did not see a single portable heavy vehicle hoist from any overseas manufacturer that can be compared with Endurequip hoists. This is true whether looking from a quality, safety, reliability or build quality point of view.

Endurequip is proud of its commitment to quality products and this will always be a core value to the business.

## Endurequip Hoists helps keep Brisbane Buses running on time

**A large new ultra-modern bus workshop has recently been completed for Brisbane Transport at Willawong in Brisbane's South West.**

Like any modern workshop, Brisbane Transport wanted to equip with the very best workshop equipment, to ensure high productivity levels, maximum worker safety and comfort.

With this in mind, they called Endurequip and placed orders for six sets of hoists to be delivered as soon as the new workshop construction was complete.

Brisbane City Council has been a longstanding client of Endurequip, having used the Portalift portable heavy vehicle hoists at all workshops, for up to 15 years.

Like all Endurequip customers, Brisbane Transport can be confident of the on-going support they receive from an Australian manufacturer and 100% spare parts availability 24/7.

# VLT Roller Brake Testers

Endurequip are delighted to be the **Exclusive Distributors** for the premium quality Van Leeuwen Roller Brake Testers.

VLT are renowned as one of Europe's best quality brake testing machine manufacturers.

Tests are quick and easy to perform. The durability of the equipment, even in very high workloads, is second to none. All VLT Roller Testers are built to the principle "only the best is good enough". The equipment is designed and built by experts, to produce highly accurate results consistently, over many years, even under the most demanding high volume conditions.

**Strong Rugged Design** - VLT Roller Testers require a minimum of maintenance. The rollers should not need replacement for at least 10 years. More than twice the life expectation of lesser machines.

**High Volume Use** - VLT test equipment is suitable for high volume use, day-in and day-out, is virtually maintenance free and very seldom needs repair. Most other Testers are not designed for this workload and will

breakdown and become unreliable, causing repair costs and inconvenient downtime for both you and your customers. Do not consider the initial investment alone. Cheaper Testers will always cost more over the life of the equipment.

## Endurequip supply new Rail Hoists to Australian Railways Group

Endurequip has an impressive client list when it comes to the design, manufacture and supply of large portable heavy duty hoists to the railway industry. This list includes some of the biggest names in the Rail industry both in Australia and overseas such as:

- Comalco
- Queensland Rail
- John Holland Rail
- Bluebird Rail
- Mount Isa Mines
- United Group
- Japan Rail
- Gemco

Endurequip are now proud to add to that list, The Australian Railways Group (A.R.G.).

Over the last few months, A.R.G. has taken delivery of three new sets of 30 tonne rail hoists. The first set of hoists, being a set of four, was delivered to A.R.G.'s Picton workshop late in 2008. A further two sets of four hoists were delivered recently to A.R.G.'s Namgulu workshop. The hoists will dramatically reduce the time currently taken to service and repair rolling stock and will provide a safer, more comfortable working environment for the workshop staff.
